

## About District Nutrition Profiles:

District Nutrition Profiles (DNPs) are available for 707 districts in India. They present trends for key nutrition and health outcomes and their cross-sectoral determinants in a district. The DNPs are based on data from the National Family Health Survey (NFHS)-4 (2015-2016) and NFHS-5 (2019-2020). They are aimed primarily at district administrators, state functionaries, local leaders, and development actors working at the district-level.

## What factors lead to child undernutrition?

Given the focus of India's national nutrition mission on child undernutrition, the DNPs focus on the determinants of child undernutrition (Figure on the left). Multiple determinants of suboptimal child nutrition and development contribute to the outcomes seen at the district-level. Different types of interventions can influence these determinants. Immediate determinants include inadequacies in food, health, and care for infants and young children, especially in the first two years of life. Nutrition-specific interventions such as health service delivery at the right time during pregnancy and early childhood can affect immediate determinants. Underlying and basic determinants include women's status, household food security, hygiene, and socio-economic conditions. Nutrition-sensitive interventions such as social safety nets, sanitation programs, women's empowerment, and agriculture programs can affect underlying and basic determinants.

## District demographic profile, 2019-20

Dindori

952/1,000

Sex ratio (females per 1,000 males) of the total population

227,731

Number of women in reproductive age (15-49 yrs)

21,102

Number of pregnant women

12,474

Number of live births

96,133

Total number of children under 5 yrs

11,843

Children under 5 yrs whose births were registered

## The state of nutrition outcomes among children (<5 years)

Dindori

Madhya Pradesh

2016

2020

### Burden on nutrition outcomes (2020)

Indicators	No. of children (<5 yrs)
Low-birth weight	NA
Stunted	37,405
Wasted	15,199
Severely wasted	4,374
Underweight	32,310
Overweight/obesity	1,827
Anemia	67,462
<b>Total children</b>	<b>96,133</b>

Note: NA refers to data are unavailable for a given round of NFHS data.

### Points of discussion:

- What are the trends in undernutrition among children under five years of age (stunting, wasting, underweight, and anemia)?
- What are the trends in overweight/obesity among children under five years of age in the district?

## The state of nutrition outcomes among women (15-49 years)

Dindori

Madhya Pradesh

2016

2020

### Burden on nutrition outcomes (2020)

Indicators	No. of women (15-49 yrs)
Underweight	66,634
Overweight/obesity	18,082
Hypertension	57,388
Diabetes	20,018
Anemia (non-preg)	148,002
Anemia (preg)	14,729
<b>Total women (preg)</b>	<b>21,102</b>
<b>Total women</b>	<b>227,731</b>

Note: NA refers to data are unavailable for a given round of NFHS data.

### Points of discussion:

- What are the trends in underweight and anemia among women (15-49 yrs) in the district?
- What are the trends in overweight/obesity and other nutrition-related non-communicable diseases in the district?

## Immediate determinants

Dindori

### Points of discussion:

- What are the trends in infant and young child feeding (timely initiation of breastfeeding, exclusive breastfeeding, timely initiation of complementary feeding, and adequate diet)? What can be done to improve infant and young child feeding?
- What are the trends in IFA consumption among pregnant women in the district? How can the consumption be improved?
- What additional data are needed to understand diets and/or other determinants?

## Underlying determinants

Dindori

### Points of discussion:

- How can the district increase women's literacy, and reduce early marriage, if needed?
- How does the district perform on providing drinking water and sanitation to its residents? Since sanitation and hygiene play an important role in improving nutrition outcomes, how can all aspects of sanitation be improved?
- How can programs that address underlying and basic determinants (education, poverty, gender) be strengthened?
- What additional data are needed on food systems, poverty or other underlying determinants?

Note: NA refers to data are unavailable for a given round of NFHS data.

#### Points of discussion:

- How does the district perform on health and nutrition interventions along the continuum of care? Does it adequately provide both prenatal and postnatal services to women of reproductive age, pregnant women, new mothers and newborns?
- How has access to health and ICDS services changed over time (food supplementation, health and nutrition education and health checkups)?
