

About District Nutrition Profiles:

District Nutrition Profiles (DNPs) are available for 707 districts in India. They present trends for key nutrition and health outcomes and their cross-sectoral determinants in a district. The DNPs are based on data from the National Family Health Survey (NFHS)-4 (2015-2016) and NFHS-5 (2019-2020). They are aimed primarily at district administrators, state functionaries, local leaders, and development actors working at the district-level.

What factors lead to child undernutrition?

Given the focus of India's national nutrition mission on child undernutrition, the DNPs focus on the determinants of child undernutrition (Figure on the left). Multiple determinants of suboptimal child nutrition and development contribute to the outcomes seen at the district-level. Different types of interventions can influence these determinants. Immediate determinants include inadequacies in food, health, and care for infants and young children, especially in the first two years of life. Nutrition-specific interventions such as health service delivery at the right time during pregnancy and early childhood can affect immediate determinants. Underlying and basic determinants include women's status, household food security, hygiene, and socio-economic conditions. Nutrition-sensitive interventions such as social safety nets, sanitation programs, women's empowerment, and agriculture programs can affect underlying and basic determinants.

District demographic profile, 2019-20

Washim

917/1,000
Sex ratio (females per 1,000 males) of the total population

361,266
Number of women in reproductive age (15-49 yrs)

20,502
Number of pregnant women

14,298
Number of live births

101,796
Total number of children under 5 yrs

14,319
Children under 5 yrs whose births were registered

The state of nutrition outcomes among children (<5 years)

Washim

Maharashtra

2016

2020

Burden on nutrition outcomes (2020)

Indicators	No. of children (<5 yrs)
Low-birth weight	NA
Stunted	35,954
Wasted	32,259
Severely wasted	15,483
Underweight	40,006
Overweight/obesity	7,054
Anemia	64,340
Total children	101,796

Note: NA refers to data are unavailable for a given round of NFHS data.

Points of discussion:

- What are the trends in undernutrition among children under five years of age (stunting, wasting, underweight, and anemia)?
- What are the trends in overweight/obesity among children under five years of age in the district?

The state of nutrition outcomes among women (15-49 years)

Washim

Maharashtra

2016

2020

Burden on nutrition outcomes (2020)

Indicators	No. of women (15-49 yrs)
Underweight	72,506
Overweight/obesity	51,155
Hypertension	79,189
Diabetes	29,299
Anemia (non-preg)	206,066
Anemia (preg)	6,919
Total women (preg)	20,502
Total women	361,266

Note: NA refers to data are unavailable for a given round of NFHS data.

Points of discussion:

- What are the trends in underweight and anemia among women (15-49 yrs) in the district?
- What are the trends in overweight/obesity and other nutrition-related non-communicable diseases in the district?

Immediate determinants

Washim

Maharashtra

2016

2020

Note: NA refers to data are unavailable for a given round of NFHS data.

Points of discussion:

- What are the trends in infant and young child feeding (timely initiation of breastfeeding, exclusive breastfeeding, timely initiation of complementary feeding, and adequate diet)? What can be done to improve infant and young child feeding?
- What are the trends in IFA consumption among pregnant women in the district? How can the consumption be improved?
- What additional data are needed to understand diets and/or other determinants?

Underlying determinants

Washim

Maharashtra

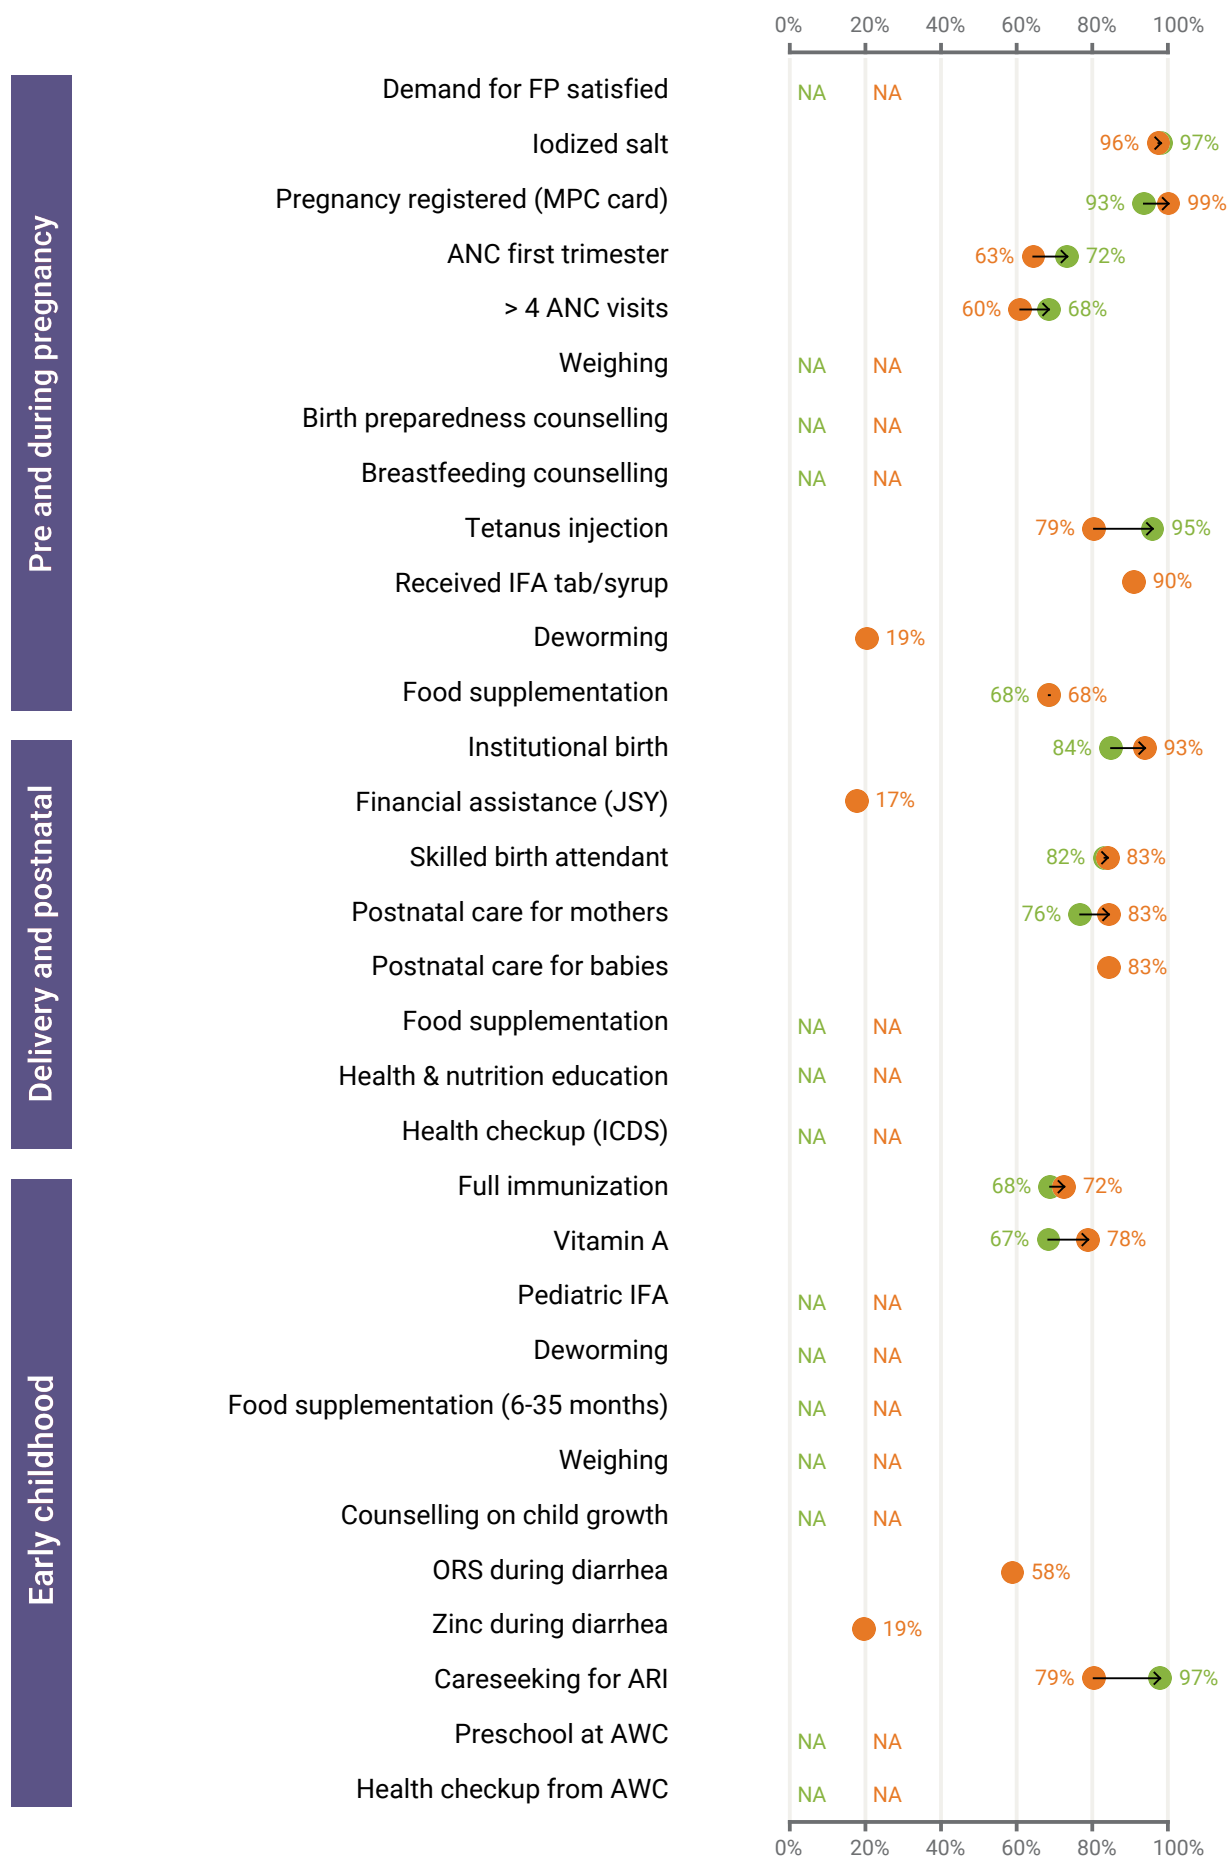

2016

2020

Note: NA refers to data are unavailable for a given round of NFHS data.

Points of discussion:

- How can the district increase women's literacy, and reduce early marriage, if needed?
- How does the district perform on providing drinking water and sanitation to its residents? Since sanitation and hygiene play an important role in improving nutrition outcomes, how can all aspects of sanitation be improved?
- How can programs that address underlying and basic determinants (education, poverty, gender) be strengthened?
- What additional data are needed on food systems, poverty or other underlying determinants?

Note: NA refers to data are unavailable for a given round of NFHS data.

Points of discussion:

- How does the district perform on health and nutrition interventions along the continuum of care? Does it adequately provide both prenatal and postnatal services to women of reproductive age, pregnant women, new mothers and newborns?
- How has access to health and ICDS services changed over time (food supplementation, health and nutrition education and health checkups)?
