

# **DISTRICT NUTRITION PROFILE**

Led by IFPRI 🕅

## PRAKASAM | ANDHRA PRADESH

**MARCH 2022** 

## **About District Nutrition Profiles:**

District Nutrition Profiles (DNPs) are available for 707 districts in India. They present trends for key nutrition and health outcomes and their cross-sectoral determinants in a district. The DNPs are based on data from the National Family Health Survey (NFHS)-4 (2015-2016) and NFHS-5 (2019-2020). They are aimed primarily at district administrators, state functionaries, local leaders, and development actors working at the district-level.

Figure 1: Map highlights district Prakasam in the state/UT of Andhra Pradesh

Given the focus of India's national nutrition mission on child

undernutrition, the DNPs focus on the determinants of child undernutrition (Figure on the left). Multiple determinants of suboptimal child nutrition and development contribute to the

outcomes seen at the district-level. Different types of

interventions can influence these determinants. Immediate

determinants include inadequacies in food, health, and care for

infants and young children, especially in the first two years of life. Nutrition-specific interventions such as health service

delivery at the right time during pregnancy and early childhood

can affect immediate determinants. Underlying and basic

determinants include women's status, household food security,

hygiene, and socio-economic conditions. Nutrition-sensitive

interventions such as social safety nets, sanitation programs,

women's empowerment, and agriculture programs can affect

What factors lead to child undernutrition?

Optimum fetal and child nutrition and development

#### **IMMEDIATE DETERMINANTS**

Breastfeeding, nutrient-rich foods, caregiving practices, low burden of infectious diseases

# UNDERLYING AND BASIC DETERMINANTS

Women's status, sanitation and hygiene, food security, socioeconomic conditions

Source: Adapted from Black et al. (2008)

# NUTRITION-SPECIFIC INTERVENTIONS

Service delivery to mothers and infants along the continuum of care, access to health facilities

#### INTERVENTIONS THAT AFFECT UNDERLYING AND BASIC DETERMINANTS

Women's empowerment, sanitation, agriculture, and social safety net programs

# District demographic profile, 2019-20

Prakasam

927/1,000

Sex ratio (females per 1,000 males) of the total population

994.335

Number of women in reproductive age (15-49 yrs)

underlying and basic determinants.

56,045

Number of pregnant women

47.735

Number of live births

<u> 265,</u>618

Total number of children under 5 vrs

47,608

Children under 5 yrs whose births were registered

2020

## Burden on nutrition outcomes (2020)

Indicators	No. of children (<5 yrs)
Low-birth weight	NA
Stunted	59,923
Wasted	23,188
Severely wasted	8,819
Underweight	65,475
Overweight/obesity	13,626
Anemia	149,391
Total children	265,618

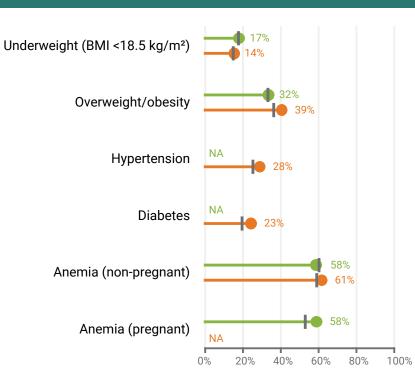

Note: NA refers to data are unavailable for a given round of NFHS data.

## Points of discussion:

- · What are the trends in undernutrition among children under five years of age (stunting, wasting, underweight, and anemia)?
- What are the trends in overweight/obesity among children under five years of age in the district?

# The state of nutrition outcomes among women (15-49 years)

Prakasam

Andhra Pradesh

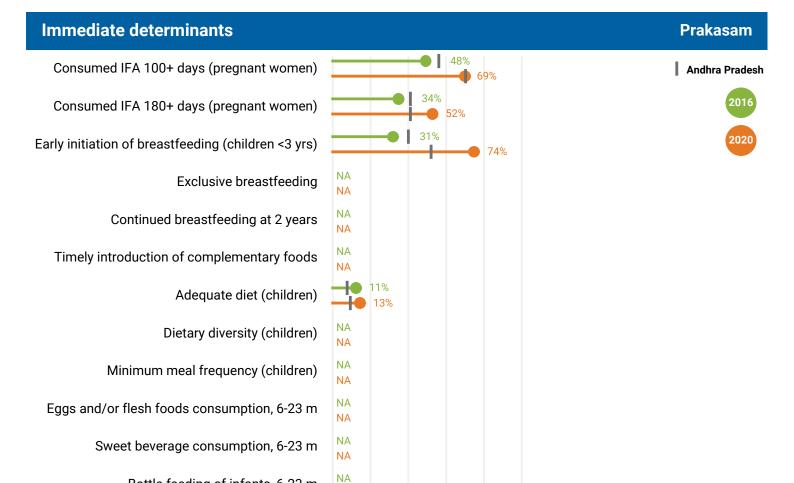

## Burden on nutrition outcomes (2020)

Indicators	No. of women (15-49 yrs)
Underweight	143,085
Overweight/obesity	392,564
Hypertension	276,723
Diabetes	230,686
Anemia (non-preg)	602,766
Anemia (preg)	NA
Total women (preg)	56,045
Total women	994,335

Note: NA refers to data are unavailable for a given round of NFHS data.

### Points of discussion:

- What are the trends in underweight and anemia among women (15-49 yrs) in the district?
- What are the trends in overweight/obesity and other nutrition-related non-communicable diseases in the district?

### Points of discussion:

• What are the trends in infant and young child feeding (timely initiation of breastfeeding, exclusive breastfeeding, timely initiation of complementary feeding, and adequate diet)? What can be done to improve infant and young child feeding?

40%

60%

80%

100%

Note: NA refers to data are unavailable for a given round of NFHS data.

· What are the trends in IFA consumption among pregnant women in the district? How can the consumption be improved?

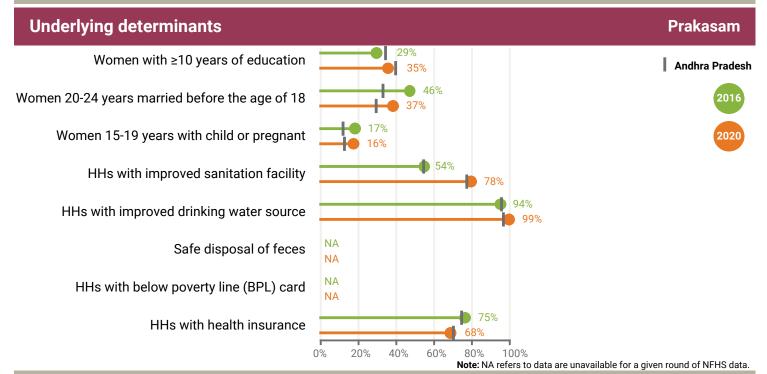

20%

NA

0%

· What additional data are needed to understand diets and/or other determinants?

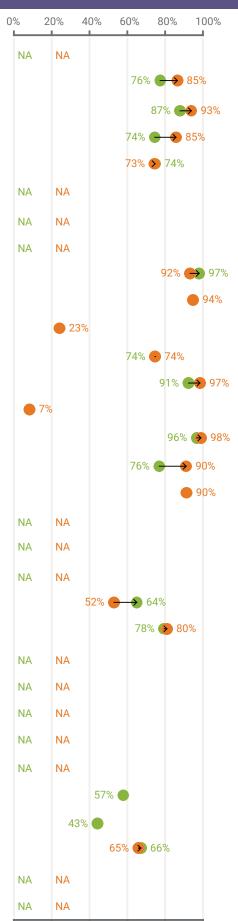

Bottle feeding of infants, 6-23 m

### Points of discussion:

- · How can the district increase women's literacy, and reduce early marriage, if needed?
- How does the district perform on providing drinking water and sanitation to its residents? Since sanitation and hygiene play an important role in improving nutrition outcomes, how can all aspects of sanitation be improved?
- How can programs that address underlying and basic determinants (education, poverty, gender) be strengthened?
- · What additional data are needed on food systems, poverty or other underlying determinants?

Demand for FP satisfied lodized salt Pregnancy registered (MPC card) ANC first trimester > 4 ANC visits Weighing Birth preparedness counselling Breastfeeding counselling Tetanus injection Received IFA tab/syrup Deworming Food supplementation Institutional birth Financial assistance (JSY) Skilled birth attendant Postnatal care for mothers Postnatal care for babies Food supplementation Health & nutrition education Health checkup (ICDS) Full immunization Vitamin A Pediatric IFA Deworming Food supplementation (6-35 months) Weighing Counselling on child growth ORS during diarrhea Zinc during diarrhea Careseeking for ARI

80%

### Points of discussion:

· How does the district perform on health and nutrition interventions along the continuum of care? Does it adequately provide both prenatal and postnatal services to women of reproductive age, pregnant women, new mothers and newborns?

0%

20%

40%

Preschool at AWC

Health checkup from AWC

· How has access to health and ICDS services changed over time (food supplementation, health and nutrition education and health checkups)?
